

Why
Renew,
Restore and
Reconnect
in a Caldera Spa?

A Caldera Spa offers Pure Comfort[®]

When you sit down into a Caldera spa you will experience:

- Therapeutic benefits that support all your major muscle groups and the areas where you're most likely to store tension.
- A variety of jets that soothe muscles and help you release stress.
- Thoughtfully sculpted and configured seats that provide relief and keep you securely seated even when the jets are on.

What is Hot Tub Circuit Therapy[®]?

It's similar to going to a gym and working out muscle groups in sequence to create results.

We've designed hot tubs that are configured to give you a targeted and soothing massage as you move from seat to seat. Your major muscles are massaged to help relax stressed areas—from the bottoms of your feet all the way up to your shoulders and neck.

Why are deeper seats so important?

They maximize comfort by cradling your body in a secure “hug-like” position as you relax in the warm, massaging waters.

When your body relaxes in a deep spa seat you're better able to enjoy the full massage power of the jets without floating out of your seat, which provides a better and more satisfying spa experience.

What makes Caldera spas so energy efficient?

Our exclusive and highly efficient EnergyPro[®] circulation pump means your Caldera spa is always hot and ready to use while meeting the most stringent CEC energy efficiency standards.

The system operates at a low wattage to filter water while reducing heater use since 80% of the energy is transferred as heat to help maintain your water temperature.

How do I keep the water crystal clear and clean?

Our simple FROG® In-line water care system is a standard feature on all Caldera spas. The bromine and mineral system is easy to manage so you can enjoy sparkling clear spa water every time you enjoy your Caldera hot tub.

What makes the controls so convenient?

Our Advent® control panel puts spa function command at your fingertips, with a large backlit screen for easy reading at night. Effortlessly control jets, water temperature, lighting, waterfall, cleaning cycles and more.

An auxiliary control panel on our Utopia® Series spas lets you operate your spa's components from a second location within the spa.

How do I reduce energy costs?

All Caldera spas are insulated with FiberCor™, an innovative spa insulation material. Applied at a two-pound density, FiberCor is four times denser than typical half-pound urethane foam.

In addition, our spa covers provide a tight seal to reduce energy use, feature child-resistant safety locks, and conform to all applicable ASTM safety standards.

What's your Style?

The soothing design of our Caldera spas enhances your calming spa experience with such amenities as:

- Flowing lines, sculpted jet recesses, ergonomic controls, and soothing sounds that make Caldera superior to other brands.
- Details and options such as energy-efficient mood lighting and Acquarella® waterfalls, as well as audio and video entertainment systems that enable you to create a customized hot tub experience.

What kind of accessories can enhance my spa experience?

You can outfit your Caldera spa with a wide range of convenience options.

Choose from an array of accessories including steps, cover lifters, hand rails, and umbrellas that are all designed to help you relax and enjoy your own private retreat.

What music options can I choose?

When you buy music-ready spa with speakers, you can add a wireless sound system to personalize your spa experience.

For added versatility, upgrade your Caldera Wireless Sound System with an internally mounted subwoofer to enhance the low-range bass and volume.

Our Bluetooth® music option allows you to stream live music or play from your own music library.

Ready to choose your own Caldera spa?

Compare our hot tubs with other brands. You'll find that our spas are designed and built by hot tub enthusiasts—people who use and experience every day the products we make. So whether you begin or end your day in a Caldera spa, you'll feel renewed, restored and reconnected.
